

NORMAN STREET BRIDGE AND JACARANDA STREET EXTENSION

JULY 2013

STUDY OUTCOMES

ULTIMATE ROUTE

The Study has recommended that the ultimate route (long-term 20+ years) for linking North Ipswich and Booval is:

Lawrence St – bridge – Norman St – Jacaranda St – Wattle St – bridge – Hamilton St

The Study also recommends:

- In the longer term Jacaranda Street and Wattle Street will need to be four lanes.
- The bridge be designed to ensure it will not be covered with water during times of major flood events.

The preferred long term cross section along Jacaranda St and Wattle St. A “fit for purpose” outcome to achieve a balance between transport, public safety and community outcomes.
